

# Shoreline Protection & Restoration

## *From Rip Rap to Native Plantings*

### RIP RAP ~ 9:00

Pat Dixon, a highly regarded certified Aquascape Contractor, will cover the basics of what is needed to protect the high energy shorelines of Beaver Dam Lake. Included will be repair and maintenance of rip rap, when does your shoreline need repair and what work needs permitting. If you send us some pictures of your shoreline in advance, he will address these without identifying properties by name. We will also leave time for Q&A.

### NATIVE PLANTINGS 10:15

Patrick Goggin, UW-Extension with specialization in shoreline protection, will cover the basics of what plantings are best for shoreline protection that also add beautification as well as providing native habitat. He will review the Healthy Lakes Program which provides DNR grants up to \$1,000 to property owners to fund these projects. Pictures from some of the 11 Healthy Lakes projects on Beaver Dam Lake will be part of the program as well as information as to how you can participate in this successful program. Handouts will be provided.

### HANDS ON ~ 11:30-1:30

Optional  
Enrollment limited to first 20 signups - \$15

Patrick Goggin will lead a group in an off-site hands-on native planting. Native plantings are one of the practices in the Health Lakes Program. Participants in this workshop will get a planting tool and a bag lunch. You will learn more about the variety of native plants, laying out different types of gardens, and future garden care. Dress appropriately for planting. We will depart from the Watermark at 11:30 a.m.

**DATE:** Saturday, May 20  
**PLACE:** The Watermark  
209 South Center Street

**Sponsored by:**

**By Monday, May 15, mail form and registration fee (if required) to:**
